

Jan Polcher is Directeur de Recherche at the Centre National de la Recherche Scientifique (CNRS) and has been working on land surface models within the Earth system modeling group of the Laboratoire de Météorologie Dynamique du CNRS (LMD) for the last 20 years. His main field of interest is the global water cycle and how it is affected by climate change and other man-made perturbations. He has coordinated the AMMA project which studied the climate of West Africa and its impacts on the societies of the region.
